Lab 1

Aim: To perform a survey of existing software systems and identify project definition

1. Project Definition / Problem Identification:

Many educational institutions still manage lab assignments using manual or semi-digital methods such as emails, pen drives, or physical submissions. These methods cause issues like misplaced files, missed deadlines, lack of submission tracking, delayed evaluation, and poor transparency for both students and faculty. Hence, there is a need for a centralized digital system to manage assignment submission and evaluation in a structured and efficient manner.

2. Project Title & Description:

Project Title: **AssignHub – Centralized Lab Assignment Submission and Evaluation System**

Project Description: AssignHub is a web-based system designed to centralize and automate the process of lab assignment submission and evaluation in educational institutions. It allows faculty to create assignments and evaluate submissions, while students can submit assignments and track their status. The system replaces manual workflows with a transparent, reliable, and organized digital process.

3. Key Features of the Project:

- **Role-Based Access System:** Secure login for students, faculty, and administrators.
- **Assignment Management:** Faculty can create, publish, and manage lab assignments with deadlines.
- **Online Submission Portal:** Students can upload and manage assignment submissions.
- **Evaluation & Feedback:** Faculty can evaluate submissions, assign marks, and provide feedback.
- **Submission Status Tracking:** Clear visibility of submission and evaluation status for students.
- **Centralized File Storage:** Secure storage and management of assignment files.
- **Notifications & Alerts:** Updates for assignment posting, deadlines, and evaluation results.
