Lab 2

Aim: To perform a survey of existing software systems and identify project definition

1. Names / Types of End Users

The AssignHub system involves the following end users:

End User	Description
Student	Uses the system to view assignments, submit lab work, track submission status, and check marks and feedback provided by faculty.
Faculty / Instructor	Responsible for creating assignments, monitoring student submissions, evaluating work, assigning marks, and providing feedback.
Administrator	Manages users, courses, batches, system configuration, and oversees overall system operation and data maintenance.

2. List of Functions for Each User

2.1 Student Functionalities:

- Secure login and basic profile management
- View enrolled courses and available assignments
- Read assignment instructions and download reference materials
- Upload and submit assignment files
- Revise submissions before the deadline
- View submission confirmation and submission history
- Track assignment status (Not Submitted, Submitted, Late, Evaluated)
- View marks and faculty feedback
- Download evaluated or corrected files
- Receive notifications for assignments, deadlines, and results
- Access a dashboard showing pending and completed assignments

2.2 Faculty / Instructor Functionalities:

- Secure login and profile management
- View assigned courses, batches, and enrolled students
- Create, edit, publish, and manage assignments
- Attach reference or supporting materials
- Monitor student submissions and submission status
- Filter and export submission data
- Evaluate assignments and assign marks
- Provide written feedback and upload corrected files
- Handle re-evaluation and result updates
- Extend deadlines and manage late submissions
- View dashboard with submission and evaluation statistics
- Generate basic performance and completion reports

2.3 Administrator Functionalities:

- Secure administrator login and account management
- Create and manage student, faculty, and admin accounts
- Manage roles and access permissions
- Create and maintain courses and academic data
- Manage batches and student-group mappings
- Assign faculty to courses and batches
- Configure system-wide settings and policies
- Monitor overall system usage via dashboard
- View audit logs for security and monitoring
- Archive data for completed semesters
